## Nadanut<sup>®</sup> Non-GMO

Nuts are a very popular and healthy way to add a distinctive flavor, eye appeal, a crunchy texture, and good nutrition to a wide variety of foods. However, in the “Age of Allergenicity” and with the growing focus on digestibility, along with the rising costs of nuts, many formulators are now trying to avoid, replace, or extend nuts as ingredients wherever and whenever possible. These same formulators are also looking for more natural and non-GMO (genetically-modified organisms) alternatives with plain and simple labels.

Inclusion Technologies produces the Nadanut<sup>®</sup> non-GMO product line, an effective way to extend or replace nuts in many formulations at much lower costs and without the risks and downfalls of nut allergens. Made using expeller pressed oil and nutritious wheat germ, this nutty and nutritious alternative is available in many authentic tasting flavors including almond, pecan, cashew, walnut, hazelnut, and pistachio. In addition, Nadanut<sup>®</sup> products are available in different sizes and shapes so you can choose the best size for your particular application.

Nadanut<sup>®</sup> products are analogs which duplicate the essential sensory characteristics of nuts in a wide variety of products such as ice cream, cookies, candies, nutritional or breakfast bars, cereal products, nut pies and snack mixes. Nadanut<sup>®</sup> products contain absolutely no nut derivatives, offer consistent availability, are less expensive than nuts, have easier digestibility and have a minimum shelf life of 12 months when stored properly. No preservatives are used and Nadanut<sup>®</sup> products can be used alone as nut replacers, or in combination with more expensive natural nuts to extend them and enhance the texture while keeping the costs to a minimum.

**Give Inclusion Technologies a call and give Nadanut<sup>®</sup> Non GMO a try in your product!**
